

FogChain Prepares to Release Trident Platform

Thursday, January 31st, 2019

VANCOUVER, BC and SAN CARLOS, CA - January 31, 2019 / (OTCQB: FOGCF; CSE: FOG; FRA: MUU3) FogChain Corp. ("FogChain" or the "Company") is excited to announce it has completed work on an initial release of Trident, a unified cross-platform application development, testing and monitoring services platform. Trident's Build-Once-Deploy-Everywhere software architecture provides developers with a suite of tools to build, test, and monitor new applications using a single code-base while being natively deployed across desktop, tablet, and mobile devices. It will feature the ability to deploy virtual testing labs across a variety of web browsers and all major operating systems. The containerized approach allows companies to scale their development, testing, and monitoring processes with minimal effort and significant cost savings.

Trident seamlessly integrates three of FogChain's premium products into a modern, easy-to-use UI. Once released, this platform will allow users to develop, test, and monitor their applications, all from the same secure environment.

Develop with RadJav:

The RadJav platform provides rapid application development tools and resources to build and launch applications across all devices, from PCs to tablets and smartphones, as well as operating systems such as Linux, Windows, macOS, and iOS – all using the same code. RadJav's unique development suite saves time, reduces cost and unifies the entire development process at commercial scale for developers, small businesses and enterprises alike.

Test with TCM:

Test Case Manager ("TCM") is a patented automated testing product that allows organizations to accomplish substantial cost savings and improved time to market by automating their test cases. Developers can use the sleek, web-based UI to create test cases using keywords, and maintain application elements within a central object repository. TCM effortlessly organizes test suites and execution settings, allowing them to run on third-party platforms that include AWS Device Farm, Sauce Labs, Browser Stack, and several others. This program also features a simplified configuration and development for automation engineers that want to leverage their coding skills, all within virtualized containers. TCM is a true Continuous Improvement/Continuous Development ("CI/CD") tool.

Monitor with Synthetic Transactions:

AppMark is our full-featured Synthetic Monitoring service that allows organizations to monitor the performance of their applications in a new and efficient way. Users can get daily benchmarked performance reports, set timers, as well as receive email notifications when there is an issue with their product. By receiving timely notification and having up-to-date data, fixes can be implemented quickly to minimize customer impact.

FogChain Lead Software Engineer, Michael Siek, commented, "Trident allows a user to operate in a cloud or local platform, which will allow them to scale their QA department with ease and will be secure whether they are using our cloud server or their own local server. The scalability and end-to-end software development lifecycle capabilities truly make this product unique and we're really excited to fill that hole in the market."

About FogChain Corp.

FogChain (OTCQB: FOGCF; CSE: FOG) is a fully integrated, end-to-end software development life cycle (SDLC) and quality assurance solutions provider. Combined with a decentralized Fog (edge network) and high-performance application development platform, FogChain's suite of services and technology provides application development at scale with greater speed, greater efficiency and at a lower cost. With the recent explosive demand for more edge computing and security within the Micro-Service, IoT, mobile data and driverless vehicle space, FogChain's Build-Once Deploy Everywhere software architecture provides developers with a suite of tools and resources that bridges devices, operating systems, and the ability to build and launch exciting new applications in a unified environment. Led by a team of Cloud and SaaS veterans, FogChain is uniquely positioned to be a leader in the next super wave of the \$500 billion global software development market. FORWARD LOOKING STATEMENTS

This news release contains "forward-looking information" and "forward-looking statements" (collectively, "forward-looking statements") within the meaning of the applicable Canadian securities legislation. All statements, other than statements of historical fact, are forward-looking statements and are based on expectations, estimates and projections as at the date of this news release. Any statement that involves discussions with respect to predictions, expectations, beliefs, plans, projections, objectives, assumptions, future events or performance (often but not always using phrases such as "expects", or "does not expect", "is expected", "anticipates" or "does not anticipate", "plans", "budget", "scheduled", "forecasts", "estimates", "believes" or "intends" or variations of such words and phrases or stating that certain actions, events or results "may" or "could", "would", "might" or "will" be taken to occur or be achieved) are not statements of historical fact and may be forward-looking statements. In this news release, forward-looking statements relate, among other things, to: the terms and conditions of the Transaction; use of funds; and the business and operations of the Company. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable, are subject to known and unknown risks, uncertainties, and other factors which may cause the actual results and future events to differ materially from those expressed or implied by such forward-looking statements. Such factors include, but are not limited to: general business, economic, competitive, political and social uncertainties; and the delay or failure to receive board, shareholder or regulatory approvals. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on the forward-looking statements and information contained in this

news release. Except as required by law, the Company assumes no obligation to update the forward-looking statements of beliefs, opinions, projections, or other factors, should they change, except as required by law.
